

Tyler Technologies Celebrates One Year of Advancement Toward Evidence-Based Policymaking

Tyler's Socrata solution helps federal, state, and local agencies improve data sharing

PLANO, Texas (Jan. 21, 2020) – [Tyler Technologies, Inc.](#) (NYSE: TYL), the largest software company in North America solely focused on providing integrated software and technology services to the public sector, celebrates the first anniversary of the [Foundations for Evidence-Based Policymaking Act](#).

This legislation provides official guidance for drafting and implementing comprehensive data strategies at the federal level.

“As a technology company trusted by thousands of clients and millions of people, we believe it is important for governments to collaborate, innovate, and modernize how they use data,” said Tyler Chief Strategy Officer Jeff Puckett. “In the past year, we’ve seen agencies make significant progress in hiring chief data officers, adopting rules to govern the use of data, and breaking down the silos that prevented information and insights from being shared.”

Data sharing and collaboration help governments create meaningful outcomes for the public they serve. For example, in addressing systemic challenges such as the opioid crisis, recidivism, or workforce development, government leaders can tap into their data to develop effective solutions, measure whether they work, and widely scale those that are proven for cost-effective outcomes.

Since 2009, Tyler's Socrata® solution has enabled government agencies to publish and share data with the public in open formats with the [Socrata Open Data API](#). Successful Socrata Open Data clients include

- U.S. Department of Transportation, which [uses the Socrata platform](#) to share state crash data, enabling access to data from intelligent transportation systems technologies, and driving data-informed policy-making
- U.S. Department of Commerce, which uses the [Socrata performance application](#) to share detailed datasets, data stories, visualizations, and dashboards on how it is helping the American economy grow
- Centers for Medicare and Medicaid Services, which uses [Socrata data visualization tools](#) to identify areas of disparities between subgroups of Medicare beneficiaries in health outcomes, utilization, and spending. These insights are used by stakeholders to inform policy decisions, target populations or geographic areas for interventions, and understand racial and ethnic differences in health outcomes.

Over the past year, many federal agencies chose Tyler to support their work in improving statistical analysis, standardizing data available to the public, and supporting evidence-based policymaking. The Socrata solution helps agencies enable compliance with this law and helps them unlock the full potential of their information resources.

“Federal agencies, especially, need tools to work together across jurisdictions, share information, and integrate workflows,” Puckett said. “We want to help open the door for federal agencies to connect to organizations on the state and local levels and with their constituents like never before.”

“You see federal agencies improving data access and designing programs that target outcomes with data,” said Franklin Williams, president of Tyler’s Data & Insights Division. “All this effort helps government make smart decisions about every dollar it spends, while improving collaboration and spurring innovation.”

Socrata, Tyler’s flagship data and insights solution, provides easy-to-deploy and FedRAMP-accredited cloud technology to unlock siloed government data and put it at the heart of every government program. Socrata’s proven and rigorous success methodology, combined with experienced domain experts in Washington, D.C., will help federal agencies evolve quickly from compliance with the law to making data a central component of every government program. All this is possible while creating a sustainable open architecture for their data sharing and analytics efforts.

About Tyler Technologies, Inc.

Tyler Technologies (NYSE: TYL) provides integrated software and technology services to the public sector. Tyler’s end-to-end solutions empower local, state, and federal government entities to operate more efficiently and connect more transparently with their constituents and with each other. By connecting data and processes across disparate systems, Tyler’s solutions are transforming how clients gain actionable insights that solve problems in their communities. Tyler has more than 26,000 successful installations across more than 10,000 sites, with clients in all 50 states, Canada, the Caribbean, Australia, and other international locations.
