Attach EasyPoint needle to any luer lock or luer slip syringe. Administer medication according to institutional policy.

Apply pressure to the color-coded tab and the safety chamber using a squeezing motion, allowing the needle to automatically retract into the safety chamber. **This device is designed for activation before or after removing the needle from the patient.**

Dispose in an appropriate sharps container per protocol of institution.

---

**EASY TO USE**

- minimal change in injection technique
- allows for single-handed activation
- clinician’s hands and fingers remain behind the exposed sharp at all times

---

**AUTOMATED RETRACTION**

Triple beveled, lubricated needle provides patient comfort

When activated, needle retracts automatically

Activation of safety mechanism automatically covers syringe luer tip, reducing risk of exposure to medication, blood/body fluids

After retraction, contaminated needle is enclosed in safety chamber preventing exposure

Needle hub & activation tab are color-coded for needle gauge
